

- Touchscreen capability allowing the user a graphical item selection screen for easy product identification.
- Multi POS Station design with ability to process End of Day routines for either individual or multiple stations.
- Multi-Site processing of POS transactions, suitable for organisation branch structure.
- Offers the user the ability to create POS Quotes, Orders (optional Back Ordering) or Invoices.
- Full barcode scanning capability for fast accurate product input. Scanning of Serial No. instantly identifies product code.
- Able to be used in multiple environments:
 - Retail: Direct over the counter type transaction where goods are presented and paid at the counter.
 - Pickup: Allows for an order to be paid immediately so selected lines can be picked up later when the Sales Receipt is presented at a pickup location
 - Delivery: Allows for an order to be paid immediately so selected lines can be delivered later to the customers premises
 - Workshop: Allows for a simple Works Order for invoicing and payments later.
- Layby capability allowing receiving of payment and final issue of Layby items(s).
- Gift Voucher processing, issuing and accepting.
- Different Invoice / Payment Receipt layouts per station if required.
- Segmented scanning capability allowing multiple data to be read from secondary equipment. i.e. Product identification and Weight read from a weighing machine into the Ostendo POS the transaction.
- Scanning identification of Items containing multiple barcodes i.e. Supplier 'A' barcode Vs Supplier 'B' barcode etc... for the same item.
- POS Station Lock and individual user login access with associated security controlling price overrides, changing Sales Dates and ability to view costs / margins.
- Alternate Operator allows for a Supervisor or other operator to take over the station.
- User Defined Payment Methods linked to specific Bank Accounts.
- Optional automatic creation of Bank Deposits for grouping payments when EOD is run.

- Ability to create orders / invoices for Cash as well as On Account customers.
- Payments from on account customers can be recorded through POS.
- EFTPOS integration with Tyro software.
- Extensive Pricing policies, Unlimited Price Levels, Discounts and special pricing / discounting with effectivity dates.
- Display linked images as the item is entered to ensure correct product identification.
- Suspend transactions by putting them on hold and recalling them to be completed later.
- Optional Standard Mobility (Android & IOS) functions allowing for:

- POS transaction ordering ready for counter processing at a later point
- Stock Counts
